

APPLE TREES

AUVIL EARLY FUJI – Ripens about six weeks ahead of the standard Red Fuji. Famous for its juicy sweet crunch and flavor.

JONAMAC – An early McIntosh type apple maturing in early to mid September. Firm and crisp.

FAMEUSE (Snow Apple) – A real old timer with a great reputation. Spicy aromatic flesh with a distinct flavor. Excellent for cider, fresh eating or cooking. Very hardy. Good storage qualities. Parent of McIntosh.

IDARED – Similar in eating and cooking characteristics to Jonathan. Very productive tree. Fruit is large. A dependable producer.

HYSLOP (Crabapple) - A medium size, about 1 to 1.5 inches in diameter scarlet red crabapple, used for jelly or to make spiced crabapples. Makes an orange colored flavorsome jelly. An excellent pollinator.

CHERRY TREES

BING – The standard for dark sweet cherries. Exceptionally large fruit of the finest quality.

LAPIN – A large mahogany red cherry that is self fertile. Excellent pollinator.

ROYAL ANN – This variety produces a large sweet cherry that is yellow in color with a red blush. Excellent canning variety. A good old dependable standby.

NECTARINES

HARDIRED - Uniform freestone with red skin color and yellow flesh that is sinfully sweet and juicy. Ideal for fresh eating, canning, and freezing. Cold hardy and disease resistant (especially tolerant to bacterial spot and brown rot). Productive, reliable, and carefree. Fruit ripens in mid August.

APRICOTS

GOLDCOT – Very hardy and productive. Golden orange fruit. No pollinator required. Bred in Michigan and tolerates hard winters.

PEACHES

*FLAMIN * FURY 24-C* - The “C” stands for cold hardy. Maintains a crop even in the harshest of winters. Large and firm. Highly colored. Bacterial spot resistant. Freestone.

PEARS

RED SENSATION BARTLETT – A red strain of the common Bartlett pear. Same qualities as its parent but with a more appealing appearance.

GOLDEN RUSSETT (BOSC) – A late russet pear with excellent eating and storing characteristics. Bronze or Gold in color.
